In 2024, the world economy faced many difficulties and challenges, the Russia-Ukraine conflict lasted for a long time, global inflation, although it has cooled down, is still high, the monetary policies of many countries continue to tighten, which has strongly affected economic growth, investment and consumption. The domestic economy still faces many difficulties and challenges, the economic growth rate is slow, demand is weak, and input costs are still high.

Market demand for bricks, tiles, and construction materials continues to be low, while the supply of production units exceeds demand, warehouses are always in a state of high inventory, so the selling price is fiercely competitive, many production units have to continue to reduce scale, suspend or close production.

Storm No. 3 YAGI and flooding in Quang Ninh and the northern region have directly affected the Company's production and business results in 2024.

In that situation, the company's management board has regularly monitored and closely followed the situation to proactively balance production and propose operational solutions to suit market needs and propose solutions to overcome difficulties, while focusing on closely following the company's goals for operation. Although focusing on operational solutions, in 2024, the company's production and business results according to the two main indicators of revenue and profit did not meet the plan, specifically as follows:
