Re: The changes in profit after tax
Year 2025 compared to Year 2024

Tay Ninh, February 4, 2026

To: The Hanoi Stock Exchange (HNX)

Pursuant to Circular No. 96/2020/TT-BTC dated November 16, 2020 issued by the Ministry of Finance providing guidance on information disclosure in the securities market;

Long An Water Supply Sewerage Joint Stock Company hereby provides an explanation for the fluctuation in profit after tax in 2025, which changed by more than 10% compared to 2024, as detailed below:

Unit: Million VND

Content	2025	2024	Changes	Rate
The profit after corporate income tax	29.837	20.255	9.582	Increase 47,31%

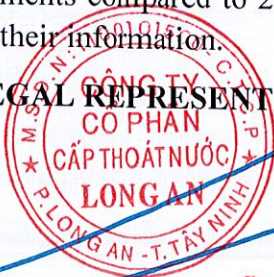

In 2025, profit after tax increased compared to the same period, mainly due to the effective control of water loss ratio and the optimization of major repair costs for assets. Through enhanced management, supervision, and operation of the water supply system, the water loss rate was significantly reduced, thereby improving the volume of commercial water sold and overall business efficiency. In addition, maintenance activities were carried out in a planned and preventive manner, which helped limit the occurrence of major repair items and consequently reduced related expenses. These factors jointly contributed to establishing a solid foundation for the increase in profit after tax during the period.

The above represents Long An Water Supply Sewerage Joint Stock Company's explanation of the fluctuation in profit after tax in the 2025 financial statements compared to 2024, submitted to the Hanoi Stock Exchange and disclosed to shareholders for their information.
