Market risk management, the interest rate of bank book, and liquidity are centrally managed at the head office with the organizational structure set up according to the model of 3 defense lines. The Bank has issued a complete system of policies, regulations and professional guidance manuals.

Portfolios with market risk exposures are subject to mark-to-market or mark-to-model valuations on a daily basis. The Bank has developed market risk measurement tools including position, actual and expected gains and loss, sensitivity indicators (BPV, duration, etc.); Value at risk (VaR); Retroactive test/Hypothesis test (Back test); Endurance test (Stress test) and capital requirements for market risks. Data sources and market risk measurement models are reviewed annually, hypothesis testing of VaR models and testing of market risk tolerance are also conducted every 6 months. A limit system is set up and monitored to control daily market risk, including quantitative limits (position, stop-loss, BPV, VaR) and qualitative limit (product, currency, term, etc.). The minimum required capital for market risk is determined by methods regulated by the SBV in accordance with Circular No. 41/2016/TT-NHNN dated 30 December 2016.

In order to manage credit risk, the Bank has issued and implemented internal credit policies and procedures. The Bank manages liquidity risk on the principle of ensuring the compliance with the regulations of the State Bank in the activities of credit institutions, maintaining the appropriate size and quality of highly liquid assets to ensure payment safety at all times. The measurement of liquidity risk is done through the cash flow method (liquidity gap) and the index method (including the set of indicators prescribed by the State Bank and the internal indicators); liquidity resistance test is done every 6 months. The bank has set up a limit system/warning threshold corresponding to the indicators.

Banking book interest rate risk is measured by assessing the impact on the Bank's net interest income (NII) and economic value of equity (EVE). Accordingly, the Bank establishes limits/warning thresholds of interest rate repricing gap, changes in net interest income, duration gap and fluctuations in economic value of equity to control potential impacts of banking book interest rate risk. At the same time, the Bank performs a capital endurance test against banking book interest rate risk with a method based on the advice from consultants.

The Bank has implemented application programs to automate the measurement, monitoring, and reporting of market risks, the interest rate of bank books and liquidity. The internal reporting system on market risk management, bank book interest rates, and liquidity is implemented daily, quarterly and irregularly in accordance with the regulations of the State Bank, meeting the requirements of internal management.
