III. ACCOUNTING STANDARDS AND SYSTEM

1. Accounting System

The company applies the Vietnamese Accounting System issued under Circular No. 200/2014/TT-BTC dated December 22, 2014; Circular No. 53/2016/TT-BTC dated March 21, 2016, which amends and supplements several provisions of Circular No. 200/2014/TT-BTC dated December 22, 2014 of the Ministry of Finance, guiding the enterprise accounting system, as well as other circulars guiding the implementation of accounting standards of the Ministry of Finance in the preparation and presentation of Financial Statements.

2. Statement of the compliance with the Accounting Standards and System

The Board of Management ensures compliance with the requirements of accounting standards and the Vietnamese accounting system issued under Circular No. 200/2014/TT-BTC dated December 22, 2014; Circular No. 53/2016/TT-BTC dated March 21, 2016, which amends and supplements several provisions of Circular No. 200/2014/TT-BTC dated December 22, 2014 of the Ministry of Finance, guiding the enterprise accounting system, as well as other circulars guiding the implementation of accounting standards of the Ministry of Finance in the preparation and presentation of financial statements.

IV. ACCOUNTING POLICIES

1. Foreign exchange rates

The recognition, evaluation, and handling of exchange rate differences during the period are carried out in accordance with Circular No. 200/2014/TT-BTC dated December 22, 2014, and Circular No. 53/2016/TT-BTC dated March 21, 2016, which amends and supplements several provisions of Circular No. 200/2014/TT-BTC dated December 22, 2014, of the Ministry of Finance, guiding the enterprise accounting system.

2. Cash and cash equivalents:

Cash includes cash on hand and demand deposits in banks. Cash equivalents are short-term investments of which the due dates cannot exceed 3 months from the dates of the investments and the convertibility into cash is easy, and which do not have a lot of risks in the conversion into cash as of the balance sheet date.

3. Financial investments:

3.1 Held-to-maturity investments:

Investments are classified as held-to-maturity investments that the Company intends and is able to hold to maturity. These held-to-maturity investments include term deposits with banks (including bills of exchange, promissory notes), bonds, preferred shares with mandatory redemption at a specified future date, loans held to maturity for the purpose of earning periodic interest, and other held-to-maturity investments.

Held-to-maturity investments are initially recognized at cost including the purchase cost and other transaction costs. After initial recognition, these investments are recorded at recoverable value. Interest from these held-to-maturity investments after acquisition date is recognized in the profit or loss on the basis of the interest income to be received. Interests arising prior to the Company's acquisition of held-to-maturity investments are recorded as a decrease in the costs as at the acquisition time.

When there are reliable evidences proving that a part or the whole investment cannot be recovered and the loss are reliably determined, the loss is recognized as financial expenses during the year while the investment value is derecognized.

3.2 Loans:

Loans are recognized at their cost, less any allowance for doubtful debts. The allowance for doubtful debts on loans is established based on the estimated level of losses that may occur.

3.3 Investments in subsidiaries, joint ventures, and associates :

Investments in subsidiaries

Subsidiary is an entity that is controlled by the Company. Control is the Company's power to govern the financial and operating policies of an entity so as to obtain benefits from its activities.

Joint ventures

A joint venture is a business entity established based on an agreement between the Company and other parties, in which the participants undertake economic activities on the basis of joint control. Joint control is understood as the requirement for consensus among the participants in making strategic decisions related to the operational and financial policies of the joint venture.

Associates

An associate company is a business in which the Company has significant influence but does not have control over financial and operational policies. Significant influence is evidenced by the right to participate in decisions regarding financial and operational policies of the investee company but without controlling those policies.

Investments in subsidiaries, joint ventures, and associates are initially recognized at cost, which includes the purchase price or the capital contribution along with any directly attributable investment costs. In the case of investments made through non-monetary assets, the investment is recognized at the fair value of the non-monetary assets at the time the investment is made.

Dividends and profits from periods before the investment was acquired are recognized as a reduction in the value of the investment itself. Dividends and profits from periods after the investment is acquired are recognized as revenue. Dividends received in the form of additional shares are only recorded as an increase in the number of shares, without recognizing the value of the shares received or at their nominal value.

A provision for impairment of investments in subsidiaries, joint ventures, and associates is made when the subsidiary, joint venture, or associate incurs losses. The provision is calculated as the difference between the actual contribution of the parties to the subsidiary, joint venture, or associate and the actual equity value, multiplied by the Company's ownership percentage in relation to the total actual contributions of the parties involved. If the subsidiary, joint venture, or associate is preparing consolidated financial statements, the basis for determining the provision for impairment is the consolidated financial statements..

The increase or decrease in the provision for impairment of investments in subsidiaries, joint ventures, and associates that needs to be recognized at the end of the financial year is recorded as a financial expense.

4. Receivables:

Receivables are recognized at the carrying amounts less allowances for doubtful debts.

The classification of receivables as trade receivables or other receivables is made according the following principles:

- Trade receivables reflect amounts due from commercial transactions arising from buy-sell agreements between the Company and independent buyers. This includes receivables from the sale of goods that have been exported and entrusted to another entity for sale.
- Inter-company Receivables reflect amounts due from subsidiaries or units without legal personality and dependent accounting, which are part of the Company's internal transactions.
- Other receivables reflect receivables not concerning the commercial nature and irrelevant to purchase and sale transactions .

Provision for doubtful debts is established for each receivable based on the aging of overdue debts or anticipated losses. Specifically:

- For overdue receivables:
 - 30% of the value for receivables overdue between 6 months and less than 1 year.
 - 50% of the value for receivables overdue between 1 year and less than 2 years.
 - 70% of the value for receivables overdue between 2 years and less than 3 years.
 - 100% of the value for receivables overdue 3 years or more.
- For doubtful debts but not yet overdue: provision is based on the estimated level of potential loss.

5. Inventories:

5.1 Inventories accounting :

Inventory is valued at cost. If the net realizable value is lower than the cost, the inventory must be valued at its net realizable value. The cost of inventory includes purchase costs, processing costs, and other directly related costs incurred to bring the inventory to its present location and condition.

The cost of inventory purchased from external suppliers includes the purchase price, non-refundable taxes, transportation, handling, and storage costs incurred during the purchase process, as well as other costs directly related to purchasing the inventory.

172
IG T
THU
HAP
NN
IMI
HO

The cost of inventory produced internally includes direct material costs, direct labor costs, fixed production overhead, and variable production overhead incurred during the transformation of raw materials into finished goods.

5.2 Method for Determining the Value of Ending Inventory: The value of ending inventory is determined using the specific identification method.

5.3 Inventory Accounting Method: The company applies the periodic inventory system.

5.4 Allowance for inventory:

Allowances for inventories are made for each inventory item whose cost exceeds its net realizable value. For unfinished services, the provision for the decline in value is determined based on the individual service with a distinct price. Increases or decreases in the balance of the provision for inventory decline at the end of the financial year are recognized in the cost of goods sold.

6. Depreciation accounting of fixed assets:

6.1 Tangible and Intangible Fixed Assets:

- Tangible fixed assets are stated at cost less accumulated depreciation. The cost of tangible fixed assets includes all expenses incurred by the Company to acquire the asset and bring it to a state of readiness for use.
- Subsequent costs are capitalized to increase the asset's carrying amount only if these costs are expected to provide future economic benefits through the use of the asset. Costs that do not meet this condition are recognized as expenses in the period incurred.
- Depreciation is calculated using the straight-line method and is based on depreciation rates determined by the regulations in Circular No. 45/2013/TT-BTC dated April 25, 2013, and Circular No. 147/2016/TT-BTC dated October 13, 2016, amending and supplementing certain provisions of Circular No. 45/2013/TT-BTC.

6.2 Finance leased fixed assets:

A finance lease is classified as an operating lease if the majority of the risks and rewards associated with the ownership of the asset lie with the lessor. Finance lease expenses are recognized as an expense over the lease term using the straight-line method, regardless of the payment method of the lease.

6.3 Investment Property:

Investment property refers to land use rights, buildings, part of a building, or infrastructure owned by the Company or held under a finance lease, intended to generate rental income or for capital appreciation. Investment property is stated at cost less accumulated depreciation. The cost of investment property includes all expenses incurred by the Company or the fair value of assets exchanged to acquire the investment property up to the point of purchase or completion of construction..

Subsequent costs related to investment property are expensed, unless these costs are expected to provide additional future economic benefits, in which case they are capitalized to increase the cost of the property.

When investment property is sold, the original cost and accumulated depreciation are written off, and any resulting gains or losses are recognized in the income or expenses for the year.

The transfer from property held for use or inventory to investment property occurs only when the owner ceases using the asset and begins leasing it to another party or when construction is completed. Conversely, the transfer from investment property to property held for use or inventory occurs when the owner starts using the asset or begins preparing it for sale. The transfer from investment property to property held for use or inventory does not change the original cost or carrying value of the asset at the transfer date.

7. Business cooperation contracts:

7.1 Jointly Controlled Assets :

The Company recognizes in its financial statements, under joint venture agreements, the following jointly controlled assets:

- The Company's share of the jointly controlled assets, classified according to the nature of the asset .
- Liabilities incurred exclusively by the Company .
- The Company's share of liabilities that must be borne jointly with other joint venture participants arising from joint venture operatio .
- Income from the sale or use of the products or services shared from the joint venture, along with the corresponding expenses incurred, shared from joint venture activities .
- The Company's costs incurred related to the joint venture's capital contribution .

Fixed assets and investment properties contributed to a joint venture contract, where ownership rights are not transferred to joint ownership of the joint venture participants, are not written off the assets. If the Company receives assets contributed by the joint venture, they are tracked as assets held in custody, without recording them as an increase in assets or business capital.

Fixed assets and investment properties contributed to a joint venture contract, where ownership is transferred and the assets are under construction as jointly controlled assets, are written off the assets in the accounting records and recognized as part of the construction in progress. After the jointly controlled asset is completed and handed over for use, based on the value of the shared asset, the Company recognizes an increase in its assets in accordance with the intended use.

7.2 Jointly Controlled Business Operations:

The Company recognizes in its financial statements for joint venture agreements under jointly controlled business operations the following:

- The value of assets currently owned by the Company.
- Liabilities the Company is responsible for.
- Revenue derived from the sale of goods or provision of services by the joint venture.
- Payable expenses that the Company must bear.

8. Prepaid expenses:

Prepaid expenses related only to the current fiscal year are recognized as operating expenses in the fiscal year .

The allocation of long-term prepaid expenses to operating costs for each accounting period is based on the nature and degree of each type of expense, in order to select appropriate methods and criteria for allocation .

9. Payables and accrued expenses:

Payables and accrued expenses are recognized for amounts owed in the future related to goods and services already received. Accrued expenses are recognized based on reasonable estimates of the amounts owed.

The classification of payables into accounts payable to vendors, accrued expenses, internal payables, and other payables is carried out according to the following principles:

- Accounts payable to vendors reflect amounts owed from commercial transactions related to the purchase of goods, services, or assets, where the seller is an independent entity to the Company, including amounts payable for imports via agents.

- Accrued expenses reflect amounts owed for goods or services received from vendors or provided to buyers but not yet paid, due to the absence of invoices or incomplete accounting documents, as well as payables for employee wages, vacation pay, and accrued production and business expenses.
- Internal payables reflect amounts owed between the parent company and its subsidiaries without legal entity status for accounting purposes.
- Other payables reflect amounts owed that are non-commercial and unrelated to the purchase, sale, or provision of goods or services.

10. Loans and Financial Lease Liabilities:

Loans, financial lease liabilities, and the payment status of loans and financial lease liabilities of the company are reflected. The company does not reflect loans in the form of bond issues or the issuance of preferred shares with a mandatory redemption clause requiring the issuer to repurchase them at a specific point in the future.

Loans or financial lease liabilities with repayment terms exceeding 12 months from the date of the financial statements are classified as long-term loans and financial lease liabilities. Liabilities due for repayment within the next 12 months from the date of the financial statements are presented as short-term loans and financial lease liabilities in order to plan for payment.

Loan-related costs (excluding interest payable), such as appraisal, auditing, and loan documentation costs, are accounted for as financial expenses. If these costs are incurred from loans specifically for investment, construction, or the production of construction-in-progress assets, they are capitalized.

For financial lease liabilities, the total amount of lease liabilities recorded in the credit side of account 341 is the total amount payable, calculated by the present value of the minimum lease payments or the fair value of the leased asset.

For loans and liabilities denominated in foreign currency, they must be tracked in the original currency and treated as follows:

- Foreign currency loans and liabilities must be converted into the accounting currency at the actual exchange rate at the transaction date;
- When repaying loans or foreign currency liabilities, the amounts are converted using the actual exchange rate at the time of each specific transaction;
- **When preparing the financial statements, the balances of foreign currency loans and financial lease liabilities must be revalued at the exchange rate in effect at the date of preparing the financial statements**
- The exchange rate differences arising from settlement and revaluation of foreign currency loans and lease liabilities at the end of the period are recognized in financial income or expenses.

11. Provisions:

Provisions are recognized when the Company has a present obligation (legal or constructive) as a result of a past event, and it is probable that settling the obligation will result in an outflow of economic benefits and the amount of the obligation can be reliably estimated.

If the time value of money is material, provisions will be determined by discounting the future outflows required to settle the obligation using a pre-tax discount rate that reflects current market assessments of the time value of money and the specific risks of the obligation. The increase in the provision due to the passage of time is recognized as a financial expense.

12. Owner's Equity:

12.1 Capital:

This explanatory note is an integral part and should be read in conjunction with the Financial Statements.

Owner's contributions are recorded according to the actual capital contributed by the shareholders or owners.

12.2 Share premiums:

Share premiums are recorded in accordance with the difference between the issuance price and face value upon the IPO, additional issue or the difference between the re-issuance price and carrying value of treasury stocks and the equity component of convertible bonds upon maturity date. Expenses directly related to the additional issue of stocks and the re-issuance of treasury stocks are recorded as a decrease in share premiums.

12.3 Other Owner's Equity:

Other equity is formed from the results of business operations, asset revaluation, and the remaining value after deducting taxes payable (if any) related to donated, gifted, or sponsored assets..

12.4 Treasury shares:

When a share capital in the owner's equity is re-purchased, the amount payable including the expenses related to the transaction is recorded as treasury shares and a corresponding decrease in owner's equity then is recognized. When this share capital is re-issued, the difference between the re-issuance price and carrying value of treasury shares is recorded in share premiums.

13. Sales and income:

13.1 Sales of merchandises and finished goods:

Sales of merchandises and finished goods are recognized when the following conditions are satisfied:

- The majority of risks and benefits associated with the ownership of the product or goods have been transferred to the buyer;
- The Company no longer retains control over the goods or the management rights of the goods as the owner;
- Revenue is reasonably certain;
- The Company has received or will receive economic benefits from the transaction;
- The costs related to the transaction can be determined.

13.2 Sales of service provision:

Revenue is recognized when the results of the transaction can be reliably determined. In cases where the service involves multiple periods, revenue is recognized for the portion of work completed as of the balance sheet date of the respective period. The results of the service transaction are determined when the following conditions are satisfied:

- Revenue is reasonably certain;
- It is probable that economic benefits will flow from the transaction ;
- The portion of work completed as of the balance sheet date can be determined ;
- The costs incurred for the transaction and the costs to complete the service transaction can be determined .

13.3 Financial income:

Revenue from interest, royalties, dividends, profits, and other financial activity income is recognized when both of the following conditions are satisfied:

- It is probable that economic benefits will flow from the transaction;
- The revenue is reasonably certain.

172
17
THU
HAP
NN
IMI
HO

Dividends and profits are recognized when the Company is entitled to receive dividends or profits from its investments.

14. Sales deductions: Revenue reductions, which are adjusted against sales and service revenues in the period, include: Trade discounts, sales price reductions, and goods returned. Taxes that are reduced from revenue, such as output VAT payable under the direct method, are not reflected in revenue.

The adjustments for revenue reductions are made as follows:

- Trade discounts, sales price reductions, and returns of goods occurring in the same period of product, goods, or service sales will be adjusted against revenue for the period in which they arise;
- In cases where products, goods, or services have been sold in prior periods, but trade discounts, sales price reductions, or returns occur in subsequent periods, the company may adjust revenue as follows:
 - + If the products, goods, or services were sold in previous periods, and the discount, reduction, or return occurs before the issuance of the financial statements, the company must treat this as an event that requires adjustment after the balance sheet date and reduce the revenue in the financial statements of the period when the report is issued (the previous period).
 - + If the products, goods, or services must be reduced, discounted, or returned after the financial statements have been issued, the company records the revenue reduction in the period in which the event occurs (the following period).

Trade Discounts: A trade discount payable is an amount that a company offers to customers for purchasing large quantities of goods. The seller accounts for trade discounts based on the following principles:

If the trade discount is shown on the VAT invoice or sales invoice as a reduction in the amount payable by the buyer (i.e., the sale price reflected on the invoice is the price after the trade discount), the company (the seller) does not use this account, and the sales revenue is reflected as the net sales price (net revenue).

The accountant must separately track the trade discount that the company pays to the buyer but has not yet been reflected as a reduction in the payable amount on the invoice. In this case, the seller records the initial revenue at the full price, without the trade discount (gross revenue). The trade discount to be separately tracked on this account typically arises in situations such as:

The trade discount that the buyer is entitled to is greater than the amount reflected on the final sales invoice. This situation may arise when the buyer purchases multiple times to reach the required quantity to qualify for the discount, and the trade discount is determined only on the final purchase;

At the end of the period, the manufacturer determines the quantity of goods that the distributor (such as supermarkets) has sold, and only then can the company determine the trade discount payable based on sales volume or the number of products sold.

Sales Price Reductions: is a discount given to the buyer due to the product or goods being defective, of inferior quality, or not conforming to the specifications stated in the economic contract. The seller accounts for sales price reductions based on the following principles:

If the sales invoice or VAT invoice reflects a sales price reduction as a deduction from the amount payable by the buyer (i.e., the sale price reflected on the invoice is the discounted price), the company (the seller) does not use this account, and the sales revenue is reflected as the reduced price (net revenue).

Only reductions agreed upon after the sale has occurred (after revenue has been recognized) and after the invoice has been issued (outside of the invoice) due to defective or poor-quality goods, etc., are recorded in this account.

For returned goods: To reflect the value of products or goods returned by customers due to reasons such as breach of commitment, violation of the economic contract, poor quality, deterioration, or non-compliance with

2021
Y
NG MA
KHAI
AM
(X)
CHIN

the specified type, quality, or standard.

15. Cost of Sales:

The cost of sales includes the cost of products, goods, services, investment real estate, and construction products (for construction enterprises) sold during the period. Additionally, it reflects costs related to investment real estate activities, such as depreciation, repair costs, leasing expenses for investment properties under operating leases (in cases of minor costs), and the cost of disposing or liquidating investment properties, etc.

For real estate business, if complete documentation on costs directly related to investment or construction of real estate is not available but revenue from the sale of real estate has been recognized, a portion of the costs is temporarily estimated and included in the cost of goods sold. Once full documentation is collected or when the real estate is fully completed, the temporarily estimated costs should be adjusted and accounted for in the cost of goods sold. Any difference between the estimated costs and actual costs is adjusted to reduce the cost of goods sold for the period of the settlement. The temporary estimation of real estate costs must adhere to the following principles:

- Only costs already included in the investment or construction budget, but lacking sufficient documentation for verification, may be temporarily included in the cost of goods sold, with detailed explanations provided for the reasons and items for which these costs are estimated during the period.
- Costs can only be temporarily estimated for real estate that has been completed and is considered sold during the period, meeting the revenue recognition criteria.
- The temporarily estimated costs and actual costs incurred must correspond to the cost rate calculated based on the total estimated costs for the real estate property considered sold (determined by the area).

Provisions for inventory write-downs are included in the cost of goods sold based on the quantity of inventory and the difference between the net realizable value and the cost of inventory. When determining inventory subject to write-down, provisions must exclude inventory covered by signed sales contracts (with net realizable value not lower than the book value) but not yet transferred to the customer, provided there is evidence that the customer will not abandon the contract.

For products, goods, and accessories sold as a bundle, the value of the accessories is included in the cost of goods sold.

For inventory losses or damages, the value is immediately recognized in the cost of goods sold (after deducting any compensation, if applicable).

For direct material consumption exceeding normal levels, labor costs, and fixed manufacturing overhead costs that are not allocated to the inventory product, they must be immediately recognized in the cost of goods sold (after deducting any compensation, if applicable), even if the product or goods have not yet been recognized as sold.

Import duties, excise taxes, and environmental protection taxes included in the cost of purchases, if refunded upon the sale of the goods, will reduce the cost of goods sold.

16. Financial expenses:

Financial expenses include costs related to financial investment activities, borrowing and lending, investments in other entities, losses from short-term securities transfers, securities transaction costs, provisions for devaluation of trading securities, investments in other entities, losses from foreign currency sales, exchange rate losses, etc.

The following items should not be recorded as financial expenses:

- Expenses related to product manufacturing, service provision;
- Selling expenses;

- Administrative expenses;
- Real estate business expenses;
- Investment and construction expenses;
- Expenses covered by other funding sources;
- Other expenses.

Costs related to bond issuance are gradually allocated based on the bond term and recognized as financial expenses if the bond issuance is for regular production and business purposes.

Interest on convertible bonds is calculated as a financial expense for the period, determined by multiplying the initial bond principal at the beginning of the period by the market interest rate for similar bonds without conversion rights or by the general borrowing rate on the market at the time of the convertible bond issuance.

If preferred shares are classified as debt, the related dividends are considered as interest expenses and should be recorded as financial expenses.

17. Selling Expenses and Administrative Expenses:

a. Selling Expenses:

Selling expenses include the actual costs incurred during the sale of products, goods, and services, such as promotional costs, product introductions, advertising, sales commissions, warranty costs (excluding construction activities), storage, packaging, and transportation costs, etc

Selling expenses are not considered deductible for corporate income tax purposes under the tax laws, but if they have proper invoices and have been accounted for correctly according to accounting regulations, they will not be deducted from accounting expenses. Instead, they will be adjusted during the corporate income tax settlement to increase the income tax payable.

Selling expenses are detailed by individual expense categories, such as: employee costs, materials, packaging, tools, fixed asset depreciation, external services, and other monetary expenses.

b. Administrative Expenses:

Administrative expenses refer to general business management costs, including employee salaries in the management department (wages, salaries, allowances, etc.); social insurance, health insurance, union funds, unemployment insurance for business management employees; office materials, labor tools, depreciation of fixed assets used for management; land rental, business license tax; provisions for bad debts; external services (electricity, water, phone, fax, property insurance, fire insurance, etc.); and other monetary expenses (customer reception, client conferences, etc.).

Administrative expenses are not deductible for corporate income tax purposes under the tax laws, but if they have proper invoices and have been accounted for correctly according to accounting regulations, they will not be deducted from accounting expenses. Instead, they will be adjusted during the corporate income tax settlement to increase the income tax payable.

18. Corporate income tax:

18.1 Current corporate income tax:

Current income tax is the tax calculated based on taxable income. The difference between taxable income and accounting profit is due to adjustments for temporary differences between tax and accounting, non-deductible expenses, as well as adjustments for non-taxable income and carried-forward losses.

18.2 Deferred corporate income tax:

Deferred income tax is the corporate income tax that will be payable or refunded due to temporary differences between the book value of assets and liabilities for financial statement purposes and their tax bases. Deferred income tax liabilities are recognized for all taxable temporary differences. Deferred income tax assets are only recognized when it is probable that taxable income will be available in the future to utilize the deductible temporary differences.

The book value of deferred tax assets is reviewed at the end of each financial year and adjusted to ensure that sufficient taxable profits will be available to allow for the utilization of all or part of the deferred tax asset. Deferred tax assets that have not been previously recognized are reviewed at the end of the financial year and recognized when it is certain that sufficient taxable profits will be available to use these previously unrecognized deferred tax assets.

Deferred tax assets and liabilities are determined based on the tax rates expected to be applied in the year in which the asset will be recovered or the liability settled, based on the tax rates that are in effect at the end of the financial year. Deferred income tax is recognized in the income statement and is only recognized directly in equity when the tax is related to items directly recorded in equity.

Deferred tax assets and deferred tax liabilities are offset when:

- The company has a legal right to offset current income tax assets against current income tax liabilities;
- The deferred tax assets and deferred tax liabilities relate to income taxes levied by the same tax authority;
- They relate to the same taxable entity;

The company expects to settle the current tax payable and the current tax asset on a net basis, or to recover the asset simultaneously with the payment of the liability in future periods when significant portions of deferred tax liabilities or assets are settled or recovered.

19. Related Parties

Parties are considered related if one party has the ability to control or exercise significant influence over the other in making decisions related to financial and operational policies. Parties are also considered related if they are subject to joint control or significant joint influence.

When considering the relationship between related parties, the substance of the relationship is emphasized more than the legal form.

20. Segment Reporting

A business segment is a component that can be clearly identified, participates in the production or provision of goods or services, and has risks and economic benefits distinct from those of other business segments.

A geographical segment is a component that can be clearly identified, participates in the production or provision of goods or services within a specific economic environment, and has risks and economic benefits distinct from those of other segments in different economic environments.

Segment information is prepared and presented in accordance with the accounting policies applied in the preparation and presentation of the Company's financial statements.

Value added tax (VAT)

The Group companies have paid VAT in accordance with the deduction method. The tax rates applied are as follows

- Export goods	0%
- Local sales	5%
- Goods for domestic consumption and other services	10%

Export-import duties

The Group companies have declared and paid these duties in line with the Customs' notices.

Excise tax

The Group companies have declared and paid these duties in line with the Customs' notices.

Corporate income tax

The Group companies have to pay corporate income tax on taxable income at the rate of 20%.

Determination of corporate income tax liability of the Group is based on currently applicable regulations on tax. Nonetheless, these tax regulations may change from time to time and tax regulations applicable to variety of transactions can be interpreted differently. Hence, the tax amounts presented in the Consolidated Financial Statements can be changed upon the inspection of tax authorities.
