**II. FISCAL YEAR, CURRENCY USED IN ACCOUNTING**

**1. Fiscal year (Financial year)**

PISICO's fiscal year starts on January 1 and ends on December 31 every year.

**2. Currency used in accounting**

The currency used in accounting is the Vietnamese Dong (VND)

### **III. BASIS FOR PREPARATION OF CONSOLIDATED FINANCIAL STATEMENTS**

#### **1. Applicable accounting standards and regimes**

The consolidated financial statements of the Corporation are presented in accordance with Vietnamese accounting standards, the accounting regime of Vietnamese enterprises and legal regulations related to the preparation and presentation of consolidated financial statements

#### **2. Basis for consolidation of financial statements**

The consolidated financial statements shall be prepared on the basis of consolidation of separate financial statements of the parent company and its subsidiaries for the same financial period, and shall be subject to uniform accounting policies.

The subsidiary is consolidated in its entirety from the date of purchase, which is the date on which the parent company actually takes control of the subsidiary, and continues to be consolidated until the date on which the parent company actually ceases control of the subsidiary.

The balances of accounts on the Balance Sheet between units in the same Group, internal transactions, unrealized internal profits or losses arising from these transactions are completely excluded.

Minority shareholder interest is the portion of the interest in the profit, or loss, and in the net assets of the subsidiary that is not held by the parent company and is presented separately on the Consolidated Income Statement and is presented separately from the equity portion of the Owner of the parent company on the Balance Sheet consolidate.

### **IV. APPLICABLE ACCOUNTING POLICIES**

#### **1. Foreign currency**

Operations arising in foreign currencies shall be converted at the exchange rate on the date the transaction arises. The balance of monetary items of foreign currency origin at the end of the accounting year shall be converted at the exchange rate on this date. Exchange rate differences arising shall be accounted in the consolidated statement of business results.

The exchange rate selected for application in accounting: the exchange rate is listed at the Joint Stock Commercial Bank for Foreign Trade of Vietnam - Binh Dinh Branch.

Financial statements with accounting currencies other than Vietnamese dong shall be converted into Vietnamese dong in accordance with Vietnamese accounting standards and the Vietnamese enterprise accounting regime. Exchange rate differences arising during the conversion of the Balance Sheet are presented in the item Exchange rate differences on the Consolidated Balance Sheet.

#### **2. Principles for recording cash amounts and cash equivalents.**

Money and cash equivalents including cash, bank deposits, money in transit, and short-term investments have a payback or maturity period of no more than 3 months from the date of purchase, which is easily converted into a defined amount of money as well as not much risk in conversion.

#### **3. Accounting principles for financial investments**

##### ***Investments held to maturity***

Investments held to maturity include term bank deposits for the purpose of earning interest on a periodic basis. Interest income from term bank deposits shall be recorded on the consolidated statement of business results on an estimated basis.

Investments held to maturity are classified as short and long-term presented when preparing the Consolidated Financial Statements based on the remaining term from the time of reporting.

### ***Loans***

Loans are determined by the original price minus provisions for bad debts. The provision for bad debts of the Corporation's loans shall be set aside in accordance with current accounting regulations.

Loans are classified as short and long-term when preparing consolidated financial statements based on the remaining term from the time of reporting.

### ***Investments in joint ventures, associates***

Investments in affiliated companies are incorporated under the equity method. A Company is defined as an associate company when the Corporation has significant influence but is not a subsidiary or joint venture of the Corporation. Significant influence is reflected in the right to participate in the decision-making of financial and operational policies of the investee but not in terms of controlling or co-controlling these policies.

Under the equity method, the investment is initially recorded on the consolidated balance sheet at the cost of the company, which is then adjusted for changes in the Company's ownership portion in the net assets of the associated company after the purchase. A goodwill advantage arises when purchasing an investment in a joint venture or associate company that is not allocated and is presented in the book value of the investment. The consolidated statement reflects the Group's ownership of the associated company's results of business after purchase. The losses of the associated company in excess of the Corporation's capital contribution at such associated company shall not be recorded.

In case a member company of the Corporation conducts transactions with a company associated with the Corporation, the unrealized profit/loss corresponding to the Corporation's capital contribution to the associated company shall be excluded from the consolidated financial statements.

### ***Investment in capital instruments of other units:***

Investments in capital instruments of other units reflect capital instrument investments but the Corporation does not have the right to control, co-control or have a significant influence on the investee party. Investments in capital instruments and other units are reflected at historical cost minus provisions for investment price reductions.

Provision for depreciation of investments is made when there is solid evidence that there is a decline in the value of these investments at the end of the accounting year.

When liquidating an investment, the difference between the net liquidation value and the book value is accounted for in income or expenses during the period.

## **4. Principles of accounting for receivables**

Receivables are recoverable amounts of money from customers or other subjects. Receivables are presented according to the book value minus provisions for bad debts.

Receivables are classified as short- and long-term presentations when preparing consolidated financial statements based on the recovery period remaining from the time of reporting.

A provision for bad debts is set aside for receivables that are six months or more overdue or receivables that have evidence that the debtor is insolvent due to liquidation, bankruptcy or similar difficulties.

**5. Principles for recording inventory:**

Inventory is determined on the basis of the lower price between the original price and the net realizable value. The original price of inventory includes the purchase value of inventory, procurement costs (if any), production processing costs (if any)... to obtain inventory in the current location and status. Net realizable value is determined by the estimated selling price minus marketing, sales, and distribution expenses incurred.

Inventories are calculated according to the weighted average method at the time of occurrence and are accounted according to the regular declaration method.

Provisions for inventory depreciation shall be set aside in accordance with applicable accounting regulations, and when there is evidence that the cost of inventory is greater than the net realizable value at the end of the fiscal year.

**6. Principles of recognition and depreciation of tangible fixed assets, intangible fixed assets, investment real Tangible fixed assets**

Tangible fixed assets are expressed at historical cost minus the accumulated wear and tear value. The historical cost of fixed assets includes the purchase price and expenses directly related to the operation of the assets as expected.

Profits and losses arising from liquidation or sale of assets are the difference between income from liquidation and the residual value of assets and are recorded in the consolidated statement of business results.

Tangible fixed assets are depreciated by the straight-line method based on the estimated useful life, specifically as follows:

	<u>The period of depreciation</u>
Factories and architectural objects	5 - 25 years
Machinery and equipment	3 - 15 years
Office equipment	3 - 8 years
Means of transport	3 - 15 years
Other assets	4 - 10 years

**Intangible fixed assets**

Intangible fixed assets represent land use rights and computer software presented at historical cost minus the accumulated wear and tear value. The value of indefinite land use rights shall not be depreciated according to current regulations. The value of fixed-term land use rights depreciated by the straight-line method based on the use life of the land lot is 50 years. Computer software is depreciated in a straight line based on an estimated useful life of 4 years.

**Investment real estate**

Investment real estate includes land use rights and factories and architectural objects held by the Corporation for the purpose of profiting from leasing. Investment real estate for lease is presented at historical cost minus the accumulated wear and tear value.

The historical cost of investment real estate is the total costs that the Company must incur or the fair value of the amounts offered for exchange in order to obtain the investment real estate up to the time of purchase or completion of construction.

Expenses related to investment real estate incurred after the initial recording are recorded as expenses in the period, unless these costs are likely to make the investment real estate generate more economic benefits in the future than the initially assessed level of operation, then the historical price increase is recorded.

When the investment real estate is sold, the historical cost and accumulated depreciation are written off, the profit and loss arising from the liquidation or sale of the asset is the difference between the income from liquidation and the residual value of the asset recorded in the consolidated statement of business results.

## **7. Principles for recording prepaid expenses**

Prepaid expenses include actual expenses that have been incurred but are related to the results of production and business activities of many accounting periods. Upfront costs are classified as short-term upfront costs and long-term upfront costs according to the principal term. Prepaid expenses are allocated to the Consolidated Statement of Business Results on a straight-line basis based on estimated useful time in accordance with applicable accounting regulations.

## **8. Goodwill**

The goodwill advantage on the consolidated financial statements is the excess between the business consolidation fee price compared to the Corporation's interest in the total fair value of the subsidiary's assets, liabilities and potential liabilities at the date of gaining control of the subsidiary. Goodwill is considered an intangible asset that is depreciated in a straight-line manner over the estimated useful life of that business advantage of 3 years.

When selling a subsidiary, the remaining value of the undepreciated goodwill advantage shall be included in the profit/loss due to the sale of the corresponding company.

## **9. Principles of accounting for liabilities**

Liabilities reflect debts payable by the Corporation arising in the course of production and business activities, including payables to sellers, the State, employees and other payables.

Liabilities are classified as short and long-term when preparing consolidated financial statements based on the remaining payment period from the time of reporting.

## **10. Cost of borrowing**

Borrowing expenses include loan interest and other expenses incurred directly related to the loans of the enterprise. Borrowing expenses shall be recorded in production and business expenses in the year when they are incurred, unless they are capitalized in accordance with the provisions of Vietnam Accounting Standard No. 16 "Borrowing expenses". Accordingly, borrowing costs directly related to the purchase, investment in construction or production of assets that take a relatively long time to complete and put into use or business are added to the historical cost of the asset until such asset is put into use or business. For private loans for the construction of fixed assets and investment real estate, the loan interest is capitalized even if the construction period is less than 12 months.

## **11. Principles for recording expenses payable**

Actual expenses that have not yet been incurred but are deducted in advance from production and business expenses in the period to ensure that when actual incurred expenses do not cause a spike in production and business expenses on the basis of ensuring the principle of consistency between revenue and expenses.

## **12. Principles for recognition of unrealized revenue**

Unrealized revenue includes revenue received in advance such as: the amount of money that customers have paid in advance for one or more accounting periods for asset leasing; interest received before lending capital or buying debt instruments and other amounts such as the difference between the selling price of deferred payment or installment payment as committed and the selling price paid immediately.....

### 13. Principles and methods of revenue recognition

Revenue is determined by the fair value of the amounts collected or will be obtained after deducting commercial discounts, sales discounts, and returned sales.

Turnover from the sale of goods is recognized when all the following conditions are satisfied at the same time:

- The Corporation has transferred most of the risks and benefits associated with the ownership of the product or goods to the buyer;
- The Corporation no longer holds the right to manage goods like the owner of goods or the right to control goods;
- Revenue is determined with relative certainty;
- The Corporation will derive economic benefits from the sale transaction;
- Determine the costs associated with the sales transaction.

Revenue from the provision of services is recognized when the result of the transaction is reliably determined. In case the transaction of providing services involves many years, the revenue recorded in the year corresponds to the part of the work completed at the end of the accounting year of that year. Revenue from service provision is determined when the following four conditions are satisfied:

- Revenue is determined with relative certainty;
- Being able to obtain economic benefits from the transaction of providing services;
- Identify the completed work at the end of the accounting year;
- Identify the costs incurred for the transaction and the costs to complete the service provided.

Deposit interest is recorded on an accrual basis, determined on the balance of deposit accounts and the applicable interest rate. Profits from investments are recognized when the Corporation has the right to receive interest.

### 14. Tax

Corporate income tax expenses include current income tax and deferred income tax.

The current income tax payable is calculated based on the taxable income and the CIT rate applied in the year. Taxable income other than pre-tax accounting profit presented on the Consolidated Statement of Business Results due to adjustment of non-taxable income or non-taxable or deductible expenses in other years (including carry-over losses, if any).

Deferred income tax is calculated based on the difference between the book value and the tax basis of the asset or debt items on the consolidated financial statements, and the projected CIT rate will apply to the year in which the recovered assets or liabilities are paid. Deferred income tax payable must be recognized for all temporary differences, while deferred income tax assets are recognized only when there is certainty of sufficient future taxable profits to deduct temporary differences. Deferred income tax is recorded in the Statement of Business Results.

Deferred income tax is reconsidered at the end of the fiscal year and will be credited as a deduction to the extent that there is sufficient taxable profit to allow the benefit of part or all of the deferred income tax assets to be used.

Deferred income tax assets and deferred income tax payable are cleared when the Corporation has the legal right to clear between the deferred income tax assets and the applicable income tax payable, and when the deferred income tax assets and deferred income tax payable in relation to corporate income tax are administered by the same tax authority, and the Corporation intends to pay the current income tax on a net basis.

## 15. Related Parties

Parties are considered involved if one party has the ability to control or have significant influence over the other in decision-making of financial and operational policies.
